Windows Tools

Install chocolatey from the instructions given in the link below.

https://chocolatey.org/docs/installation

Run all the below commands on Powershell (Open Powershell as Admin)

choco install virtualbox
choco install vagrant
choco install git
choco install jdk8
choco install maven
choco install awscli
choco install intellijidea-community
choco install sublimetext3.app

MacOS Tools

Install brew from the instructions given in the link below.

https://brew.sh/

After installing homebrew
Create a file in users home directory with name .curlrc with content "-k"
(-k without quotes and give a new line character after -k.)

Steps:
1. Open Terminal
2. echo -k > ~/.curlrc
3. cat ~/.curlrc

Run all the below commands in Terminal

brew install --cask virtualbox
brew install --cask vagrant
brew install --cask vagrant-manager
brew install git
brew install openjdk@8
brew install openjdk@8
brew install maven
brew install --cask intellij-idea
brew install --cask intellij-idea-ce
brew install --cask sublime-text
brew install awscli
